

# WARMER WINDOWS

This Winter, you don't have to choose between closing the curtains for warmth or opening them for light. You can now easily and inexpensively turn your thermal-conducting window into an energy efficient unit that will help keep your interior warmer.

The answer is Low E window film.

Keeps rooms warmer  
in Winter and cooler in  
Summer

Coating reflects much  
of the radiant heat  
back into the room -  
so your heat isn't  
flying out the window

When applied to clear  
single glazing, annual  
thermal insulating  
performance  
approaches that of  
clear double glazed  
windows

Visible light  
transmission can be  
as high as 70%,  
giving you light  
without the cold

Lower cost compared  
to new high  
performance windows
