TOP FILMS

Window films today are a far cry from the bubbly, brown-tinged films that adorned windows in decades past. They now offer greater variety of shades, colours and performance levels. Low E films work well in Melbourne's varied climate, helping to retain up to half the heat inside the room on cold days, and block up to half the heat from entering on hot days. Window film can also help meet council overlooking requirements. Find products and installers at wfaanz.org.au
